THE  
DECENNIAL CENSUS OF THE COMMONWEALTH.  
1905.

---

VOLUME IV.

AGRICULTURE, THE FISHERIES, AND COMMERCE.

---

INTRODUCTION.

The data presented in this volume represent the results of the Census of 1905 relative to (A) Agriculture, (B) the Fisheries, and (C) Commerce.

*A. — Agriculture.*

The agricultural schedule for the Census of 1905 was approved by the Governor and Council on November 15, 1905. Under the provisions of the Census law, the information was collected by Special Agents who made a personal canvass of the farms of the Commonwealth, beginning their work February 19, 1906. The statistics supplied as regards "Products" were for the year beginning November 16, 1904, and ending November 15, 1905; the return for "Property" being as it existed on November 15, 1905. Schedules were gathered from every person who either owned, hired, or carried on a farm, market garden, orchard, nursery, seed garden, etc., or who was engaged in raising garden products, without limitation as to the extent of product or the value of property, provided the operations were conducted on a farm or on property which could be classified as a farm under the instructions given. A new feature connected with the Agricultural Census was the construction of a map of the woodland of the State, giving the location of the various tracts and a specification of the different kinds of wood composing them. This work was done in the interest of the newly-created office of the State Forester.

Massachusetts does not rank among the great agricultural states of the Union, but the extremely congested character of its population, as shown by the number of its growing cities, offers opportunities for intensive farming which may be very profitable. It is essential, therefore, that the facts relative to agriculture in Massachusetts should not only be sys-

tematically collected and presented as a matter of record, but that the data in question should be tabulated and published with sufficient detail to afford those interested in the development of this field ready access to essential facts. In my report to the Legislature of 1908 reviewing the progress made up to that time toward completing the Census of 1905, I said:

It is a most regrettable fact that, despite the excessive cost of the last Census to date, there remains a considerable amount of data which the Commonwealth authorized the Bureau to collect in 1905, but which must remain untabulated and, therefore, completely useless unless the Legislature desires to make still another appropriation for this purpose. . . . The tabulation of the agricultural statistics now being prepared will exhibit aggregate values only, by cities and towns; that is to say, it will present the aggregate values of animal products, dairy products, food products, etc., but will not classify these products by individual articles, either as to value or quantity. To use convenient illustrations, the projected tabulation of agricultural products will not show the number of bushels of cranberries raised in the State or the total value; it will not show the number of pounds of butter produced or the value. There are frequent calls for this kind of information, both from those directly interested in agriculture and from manufacturers of and dealers in agricultural supplies, and these data were secured when the Census was taken.

Had the original plan of the Agricultural Census involved the tabulation and publication of the results in detail as above suggested, the entire work would undoubtedly have been completed much sooner and at an appreciable saving of expense; but the Legislature, after due consideration of the facts and circumstances, decided that the additional work should be undertaken. While the proposition met with no substantial opposition the Resolve authorizing the work and providing the necessary appropriation of \$8,000 went through the Legislature very slowly and did not become a law until June 12, some five months after the subject had been called to the attention of the General Court. The tabulations, therefore, could not be completed until January 16, 1909, after which the aggregating of results and verifications had to be made, so that it was the latter part of July of the present year when the last copy of the matter authorized by the Legislature of 1908 to be prepared was ready for the printer.

The definition of a farm as given to the agents sent into the field to gather data for the Census of Agriculture was as follows:

*Farms.* As a general rule a farm means land cultivated or operated for the support or profit of the proprietor or operator, or both, for which reason the Bureau includes market gardens, nurseries, orchards, seed gardens, etc., under the general title of Farm.

A general farm usually consists of a certain amount of arable land for the cultivation of vegetables, cereals, fruits, etc., grass land to be used for production

of hay, pasture land for the use of the stock, woodland from which to obtain fuel, fence rails, posts, etc., buildings for the protection of the farmer, his family, and movable property, which with machines, implements, and live stock complete the requirements of such a farm.

Upon some farms crops are arranged so as to furnish the principal articles of consumption for the family and live stock, while others make a specialty of certain products, as in the case of so-called market gardens (devoted principally to raising vegetables and fruits), tobacco farms, milk farms, stock farms, etc., from the sale of the products of which, necessary articles not raised upon the farm are purchased. Therefore, it follows that any land used for the production of crops, for pasturage, for nurseries and greenhouses, or as woodland is classed for Census purposes as agricultural land.

A large proportion of the farms of this Commonwealth are occupied by their owners or by lessees. Others are occupied by superintendents or managers who conduct the farms, etc., for the owners, who are generally non-residents of the city or town in which the farms are located; while stock companies and other combinations are also represented in the ownership list.

In order that the field work might be pursued rapidly, the Commonwealth was originally divided into 124 districts, so arranged as to secure the best electric and steam railroad communication for the special agent assigned to do the work in each division, and at the same time to make the number of farms located in the different districts as uniform as possible. As the work progressed, however, it was found necessary to subdivide several of these districts, so that there were actually 154 of them before the work was completed. A special agent was assigned to each of these divisions, but for various reasons several of these agents served only a short time, so that the number of different persons actually employed upon field work for longer or shorter periods was 137. Many of the original appointees were transferred to other divisions upon the completion of their own territory. In addition to the field agents there were employed upon supervisory work, one Expert Special Agent in Charge, one Expert Special Agent who acted as Chief of Inspectors, and five Assistant Inspectors, each of the latter being assigned to duty in different parts of the Commonwealth. The actual work of the field agents was completed on October 28, when but two were at work.

Prior to the commencement of the field work all Granges and other agricultural societies were requested to bring the Census to the attention of their members and all persons engaged in the raising of agricultural products, and to request that accurate accounts be kept of quantities and values for the year preceding November 15, 1905, and that estimates of number and value of agricultural buildings and other properties be prepared with a view to expediting the work of the agents charged with the collecting of the facts. Communication was also had with representatives of the cranberry raising interests. It is believed that substantial benefit resulted to the Census from this policy of seeking the co-operation in advance of the interests immediately concerned.

*B. — The Fisheries.*

The schedule for The Fisheries was approved by the Governor and Council on January 4, 1905.

It was found difficult to obtain the value of the vessels from some of the persons engaged in the fisheries, although they were able to supply the other required information; and, for this reason, a table prepared by the Marine Insurance Company, Ltd., showing the value of the different kinds of vessels in proportion to their tonnage and age, was used. This table was also used by the United States officials in their work and its adoption by Massachusetts in 1905 may, in a measure, account for the increased value of vessels, although it seems clear that a more costly class of vessels are in use now than were engaged at the taking of the previous Census. In ascertaining the quantities and kinds of fish caught, including quahaugs, clams, lobsters, and other shell fish, the Bureau had to rely upon those found in the business at the time; but it is obvious that large quantities of fish, including shell fish, are caught by those who visit the seashore for pleasure and by those who, for a short season, follow this vocation for a living and who could not be located by the Census agents.

In obtaining information relative to the Inland Fisheries, a letter was sent to each Fish and Game Warden and Deputy-warden, requesting the names of those known to be engaged in fishing in the ponds and streams of the Commonwealth, whether as a business or for pleasure. Many names were thus obtained, and these persons, as well as others, were personally interviewed by agents. Of course, in some instances, it was difficult to obtain the weight of the trout caught, but in nearly every case a statement was secured of the number caught, and from various sources of information an approximate weight was estimated. While a large quantity of the fish was caught for pleasure or for home consumption and values could not be given by those who caught them, they were included after a careful investigation of the market value of the different kinds of fish. In addition to obtaining the facts relating to The Fisheries, an attempt was made to gather facts regarding the number of acres of flats between low and high water, which were suitable for oysters, clams, and scollops, and to what extent sewerage outflow tended to contaminate these areas; but the sources of information were often so untrustworthy that it has been deemed unwise to publish the figures.

*C. — Commerce.*

The schedule used in this investigation was approved by the Governor and Council on December 21, 1904, and the agents began making collection of data the first of the year 1905.

Before starting field work, the several custom houses in the State were visited, and from their records were obtained the names of all vessels registered in Massachusetts and a statement of the kind of vessel registered, tonnage, and what business it was engaged in, together with the name and address of the managing owner, as well as the name of the captain. From the same source were also obtained the names of all vessels that had arrived in Massachusetts during the year 1904, together with their tonnage and the ports at which they were registered. This information was of great assistance in ascertaining the Commerce of the State. The work of obtaining it was commenced, previous to the field work, on November 7, 1904, the records thus obtained furnishing a means of checking the work of the agent assigned to the collection of the statistics.

Mr. Charles C. L. Moore had charge of the field work involved in the taking of the Census of Agriculture, and Mrs. Lena B. Baldwin had charge of the tabulations and the preparation of copy for the printer, including verifications and proof reading. The field work required for the statistics of The Fisheries and Commerce was under the supervision of Mr. Charles Thompson, and the tabulations and preparation of copy for the printer for this section of the work were in charge of Miss A. Louise Foster. The faithfulness and care with which these employees of the Bureau of Statistics performed their respective duties is entitled to cordial recognition.

The various subdivisions and general plan of the arrangement of this volume are fully set forth in the Table of Contents, and a digest or summary of the statistics is given on the pages immediately following this Introduction.

CHARLES F. GETTEMY,

*Director, Bureau of Statistics.*

STATE HOUSE, BOSTON, November 1, 1909.

## ANALYSIS.

## A. — Agriculture.

The presentation showing Agricultural Products and Property by towns is found on pages 3 to 92. The values given are as returned by the farmers themselves and bear no relation to those made by the assessors for purposes of taxation, and so far as "Products" are concerned, the values are also based upon the amounts received by the farmers themselves for the articles when sold, or, if not sold but used on the farm, their value was estimated on the same basis. The building values are in general the amounts that would be required to replace the buildings, should they be destroyed by fire; that is, the insurable values. The values are shown under each city and town name and are also accompanied by percentages which show the proportion which each particular class of Products and Property bears to the total; the figures aggregating 25 per cent or more of the total value of products of the city or town are presented in **full face** type, so that they may at once attract the attention of the reader.

In Table I is shown the aggregate value of agricultural products from 1875 to 1905, with percentages, the currency values reported in 1875 having been reduced to gold. The total value in 1905 was \$73,110,496, of which Worcester County produced \$14,279,288, or 19.53 per cent; Middlesex was a close second, producing 16.55 per cent of the total, or \$12,098,104. These two counties have continually held the lead since 1875.

Table II of the Analysis shows the aggregate value of agricultural products and the population for each city and town in the order of their rank in 1905 as compared with the same cities and towns in 1895.<sup>1</sup> The proper method of reading this table is as follows:

<sup>1</sup> The names of the cities are printed in SMALL CAPITALS; the towns are in Roman.

The population of Worcester in 1905 was 128,135 and the value of agricultural products, \$1,491,315, the city ranking first in the value of agricultural products in 1905 as against third place in 1895, and ranking second, in both years, in population.

TABLE II. — *Relative Rank of Cities and Towns for Population and Value of Agricultural Products.*

CITIES AND TOWNS.	Counties	Total Population 1905	Value of Agricultural Products 1905	RELATIVE RANK

The statistics relative to Dairy Products are contained on pages 95 to 107. From the recapitulation on page 107, we see that the aggregate value of Dairy Products is \$22,417,531, butter having a value of \$1,063,053; cream, \$1,622,518; and milk, \$18,820,671. The quantities produced and values received for Dairy Products in the different Censuses from 1845 to 1905<sup>1</sup> are shown in the following table, the currency values reported in 1865 and 1875 having been reduced to gold values.

TABLE III. — *Dairy Products for 1845, 1855, 1865, 1875, 1885, 1895, and 1905.*

<sup>1</sup> The statistics for the Federal Censuses are omitted, for the reason that the agricultural facts have hitherto not been taken by this department and the United States Census Office on the same basis, and therefore are not comparable, but those for Massachusetts since 1875 have been taken on the same basis and are fairly comparable.

The following table brings forward from previous Censuses such figures as are available for products classified as Cereals. The values originally reported in currency in 1865 and 1875 have been reduced to gold.

TABLE IV. — *Cereal Products, 1845, 1855, 1865, 1875, 1885, 1895, and 1905.*

With respect to acreage and value of Cultivated Land, the presentations which begin on page 255, entitled "Agricultural Property: By Name," are brought forward in the form of percentages in the following table and compared with similar returns for 1895. The land devoted to hay, in 1905, represented 75.62 per cent of the acreage and 62.67 per cent of the value of cultivated land.

TABLE VII. — *Cultivated Land.*

CLASSIFICATION OF LAND.	PERCENTAGES OF TOTAL ACREAGE		PERCENTAGES OF TOTAL VALUE	
	1895	1905	1895	1905
Hay, . . . . .	73.12	75.62	62.67	62.67
Farm crops, . . . . .	18.00	15.13	16.24	16.13
Market gardens, . . . . .	1.49	2.89	5.62	7.65
Nurseries, . . . . .	0.10	0.10	0.40	0.24

Other cultivated, . . . . .	2.84	1.19	5.75	3.31
TOTALS, . . . . .	100.00	100.00	100.00	100.00

The rank of the different counties with respect to all cultivated land and hay land in acreage and values follows, comparing 1905 with 1895. The general statement as to values of Massachusetts farm land, which has often been made, may properly be repeated here; that is, that the values of property are affected by its location. In cities, and in towns near cities, values range much higher than in remote parts of the State, because the agricultural land may, in many cases, be readily transformed into building land, or has a relatively high value on account of its proximity to a market and the character of the product to which it is devoted. For example, land used for hay in Suffolk County has an average value of \$551.65 per acre, while for the State at large the average value is but \$58.40 per acre, and in Berkshire County, the county ranking second in acreage, it is but \$46.47 per acre.

In 1895, Suffolk County ranked thirteenth in acreage as to all cultivated land and fourth in value; in 1905, fourteenth in acreage and eleventh in value. Berkshire County ranked second in acreage in 1895 and fifth in value; in 1905, second in acreage and third in value. The table can be studied to great advantage by those interested in land values.

TABLE VIII. — *Relative Rank of All Cultivated Land and Hay Land.*

COUNTIES.	RANK AS TO ALL CULTIVATED LAND				RANK AS TO HAY LAND			
	1895		1905		1895		1905	
	Acreage	Value	Acreage	Value	Acreage	Value	Acreage	Value

Table X permits a comparison of the average values per acre of the different sub-classes of land by counties and for the State. The entirely abnormal values of land still properly classed as agricultural land in Suffolk County, and, of course, largely within the geographical limits of the city of Boston, are forcibly brought out in the following table. Although still in use for agricultural purposes, that is, for some one of the purposes indicated by the class head, this land has largely appreciated in value on account of its suitability for residential or business purposes.

TABLE X. — *Comparative Acreage Values.*

THE STATE AND COUNTIES.	AVERAGE VALUE PER ACRE OF LAND USED FOR —

Plymouth, . . . . .	95.09	26.24	15.05	36.04	13.19
Suffolk, . . . . .	1,258.38	1,987.63	877.52	796.43	1,513.31
Worcester, . . . . .	55.82	18.56	19.68	41.55	19.11

The following table gives for the principal classes of property a comparison between 1895 and 1905 of the quantities and values returned, together with the percentages of increase or decrease in 1905 as compared with 1895. The land used for hay shows an increase in acreage in 1905 as against 1895 of 16.44 per cent, and an increase in value of 16.42 per cent. Farm crops show a decrease in acreage of 5.32 per cent, but an increase in value of 15.63 per cent. Other lines of the table may be read in a similar manner.

TABLE XII. — Comparative Property Statistics.

Table XIII shows the percentages which the number of schedules in each class formed of the total number of schedules received in 1905 as compared with 1895. From this table it plainly appears that of the different parcels of land used for agricultural purposes, 57.59 per cent in 1895 and 34.34 per cent in 1905 were farms devoted to general agricultural products and not to special products; in 1905, 5.07 per cent were, in accordance with the method of classification, dairy farms; 0.85 per cent, egg and poultry farms; 1.39 per cent, market gardens; 1.86 per cent, cranberry bogs; 15.17 per cent, detached lots devoted to agricultural purposes but not constituting farms in the common acceptance of that term.

TABLE XIII.

CLASSIFICATION.	1895		1905

For the purpose of determining the respective rank of the different kinds of agricultural enterprise considered as investments in the different cities and towns and for the State, we present in Table XIV a showing of the number of cities and towns in the State, by counties, in which the designated kinds of agricultural specialties, as classified, show the largest return of product in proportion to the value of property.

It appears from the final columns for the State that in 83 municipalities the return of product value from agricultural land classified under the head of dairy farms showed a larger percentage of the aggregate value of the property returned than was derived in these towns from any of the other classes, with the exception of mines, quarries, pits, etc. These towns constituted 23.45 per cent of the total number of cities and towns in the State. In other words, when the value of product is figured as a percentage of the value of property we find that in about one-quarter of the cities and towns in the State, the returns from the farms classed as dairy farms outranked all the other classes which appear in the table. This was the case in three towns in Barnstable County, 21 in Berkshire, one in Bristol, two in Dukes, four in Essex, eight in Franklin, seven in Hampden, seven in Hampshire, eight in Middlesex, three in Norfolk, five in Plymouth, and 14 in Worcester. In 41 towns, or 11.58 per cent of

the total number of cities and towns in the State, the percentage of product of property returned from market gardens outranked all other classes, five of these towns being in Bristol County, eight in Essex, seven in Worcester, and the others distributed among the different counties except Nantucket and Suffolk. In 31 towns the returns from florists showed a higher percentage of the value of property than appeared in any of the other classes. These cities and towns formed 8.76 per cent of the total number of cities and towns in the State, and nine of them were located in Middlesex County.

The main presentation (pages 405 to 484) showing the relation of product values to property values, from which the consolidated figures which appear in this analysis table were derived, will show which of the cities and towns lead in this respect in the different classes. This analysis table, as previously stated, gives the number of cities and towns in which the product returned in the specified classes, respectively, showed the highest proportion of the value of property when expressed as a percentage of such property value.

### B. — The Fisheries.

To measure the manufacturing industries of the State we ascertain the capital devoted to production and the value of goods made or produced. The status of agriculture is indicated by the value of agricultural products and property; and the condition of the fisheries may be shown by analogous figures representing investment and value of product. On pages 491 to 573 will be found the figures for 1905 for the fisheries in Massachusetts. The collection of the so-called Inland Fisheries in 1905 and the changes otherwise made in the work render impracticable, in most instances, comparison with the figures of previous Censuses. Table I of the Analysis gives the value of investments and value of product; Table II, the number of persons engaged in the fisheries; Table III, the number of registered vessels, the tonnage, and the number of officers and crew; and Table IV gives the value of the principal catch of the fisheries for the Censuses of 1875 to 1905.

TABLE I.—*Investments and Value of Product. 1905.*

Whale oil, . . . . .	435,072	220,766	212,283	15,000

<sup>1</sup> Includes clams shucked and cleaned.<sup>2</sup> Includes Spanish mackerel.<sup>3</sup> Includes porgy.<sup>4</sup> Includes oysters shucked.

### C. — Commerce.

The statistics covering the returns for ocean and coastwise commerce are embraced in the pages 575 to 598. Of these tables we here consider the one on page 582 covering the receipts from vessels for freight and passengers and compare the figures there given with similar figures for 1885 and 1895, the increases shown in 1905 over the two former years being given in amounts and percentages.

RECEIPTS FROM VESSELS AND YEARS, WITH INCREASES (+) AND PERCENTAGES.	Amount Received for Freight	Amount Received from Passengers	Amount Received for Freight and from Passengers
1885, . . . . .	\$10,731,637	\$2,184,337	\$12,915,974
1895, . . . . .	12,029,488	3,323,907	15,353,395
1905, . . . . .	24,792,584	6,189,647	30,982,231
Increase in 1905 over 1885, . . . . .	+ 14,060,947	+ 4,005,310	+ 18,066,257
Percentage of increase, . . . . .	+ 131 02	+ 183 37	+ 139 88
Increase in 1905 over 1895, . . . . .	+ 12,763,096	+ 2,865,740	+ 15,628,836
Percentage of increase, . . . . .	+ 106 10	+ 86 22	+ 101 79

Comparisons cannot be made between the Census of 1895 and 1905, owing to the dissimilarity of the bases upon which the statistics were taken. In 1905, information was obtained showing the number of vessels registered and belonging to Massachusetts, with their tonnage and values, and the same information was obtained regarding all other American vessels. By this means, we were able to show to what extent the citizens of Massachusetts were engaged in the industry as compared with other American citizens. In relation to ocean commerce engaged in by foreign vessels, the agents of these vessels in many cases claimed that they could give only an estimate of the number of tons of freight and number of passengers arriving in this country, for the reason that the records were all kept at the transatlantic offices. In view of this fact, the record at the Custom House of all foreign vessels arriving was taken, together with the kind and amount of freight and number of passengers; this was compared with the agent's estimate and, happily in most cases, found to be nearly identical. The number of vessels of all kinds, together with their tonnage and value, which arrived in each port of the State, also showing the kind and amount of cargo imported and exported with the amount received for transportation, was taken, but in the final tabulation a vessel which had arrived at a given port several times or had visited different ports was considered as only one vessel.

The Census of 1895 presented statistics of ocean and coastwise commerce, but only those vessels owned wholly or in part by residents of Massachusetts and vessels engaged in ocean traffic, owned principally by foreigners, were included. In the Census of 1905, not only have the two classes previously mentioned been included but a third has been added comprising all vessels entering or leaving Massachusetts ports during the year 1904, whether owned wholly or in part by non-residents. The plan followed in 1895 did not give, nor did it intend to give, the complete statistics of commerce for the Commonwealth, being limited to Massachusetts owned vessels, the business done by foreign steamship companies owned by foreigners being added because these companies had offices in Boston and other Massachusetts ports. But the purpose of the Census Law of 1905 was to obtain complete statistics of the State's commerce by whomsoever conducted. The result contains figures so large that they render comparisons with the 1895 returns impossible.

## RECAPITULATION. FOR THE STATE.

[In this recapitulation are included those agricultural products arranged alphabetically, for each of which the number of producers, quantity raised or produced, and value of same, are given under its respective head for each city and town in the Commonwealth. These presentations cover pages 93-251, *ante.*]

RECAPITULATION. FOR THE STATE.

[In this recapitulation the same agricultural products are considered as in the one preceding, the articles being also arranged alphabetically. Values and percentages only are included in this recapitulation, but the value of the total product for the Commonwealth is considered. The value of the agricultural products presented by name, pages 93-251, *ante*, is \$44,887,945, the total value of agricultural products being \$73,110,496. This leaves a value of \$28,222,551 which appears opposite the line "All other products." This value represents 38.60 per cent of the total value of agricultural products. In other words 61.40 per cent of the total value of agricultural products is shown in detail by cities and towns.]

<b>TOTAL, . . . . .</b>	<b>\$73,110,496</b>	<b>100 00</b>

## RECAPITULATION. FOR THE STATE.

[In the head note to the preceding recapitulation it is shown that a value of \$28,222,551, being 38.60 per cent of the total value of all agricultural products, was not presented in detail for each city and town in which said products were raised or produced. For all practical purposes, however, the presentation by towns, pages 1-88, *ante*, supplies sufficient specification by name, as regards the following classes of agricultural products: Meats, Hay, Straw, and Fodder, Wood Products, Domestic Manufactures, Food Products, Wooden Goods, Greenhouse Products, Hothouse and Hotbed Products, and Nursery Products. It will be seen, therefore, that adequate presentation by name for cities and towns has been given for a value of \$68,200,230, or 93.29 per cent of the total value of all agricultural products for the Census year 1905.]

THE SEA AND SHORE FISHERIES.

---

---

# THE SEA AND SHORE FISHERIES.

---

The statistics of the Sea and Shore Fisheries of the Commonwealth of Massachusetts, based upon the returns of the Decennial Census of 1905, are shown hereinafter in one presentation, with four subdivisions, which latter may be briefly summarized as follows:

## **Investments.**

Under "Investments" are shown, in detail, the working capital invested in those cities and towns of the State in which the industry is carried on; the quantity and value of apparatus employed; and the quantity and value of salt and ice used.

In order that the form of presentation of the statistics may be thoroughly understood, particular reference will be made to the statistics for the town of Barnstable on page 7. On the line "Cash capital, etc.," the amount \$70,348 is given in parentheses; on the line "Apparatus" the amount \$9,290 appears; on the line "Salt and ice" the amount \$746 is given. The total of these three amounts, being the sum of the "Investments," is shown in the second column, \$80,484.

## **Products.**

The total value of fish products in the town of Barnstable was \$95,289; on the line "Food fish" is found the total value of the product, \$43,769; "Fish products," \$250; and "Shell fish," \$81,270.

## **Food Fish Preparations.**

This subdivision will be easily understood. The different kinds of food fish preparations are mentioned and, in the second column, the value of such preparations.

## **Persons Engaged in the Fisheries.**

Under this head will be found the number of partners, with distinction of sex: the number of stockholders, with a similar distinction; and a statement as to the number of estates and their interests. The number of people employed on vessels (Vessel Fishermen) is given, with a statement as to place of birth; similar information is given in regard to the number of persons employed on land.

## **Subsidiary Tables and Recapitulations.**

At the end of the presentation will be found subsidiary tables and recapitulations, based upon the information given in the town and city showings. These tables and recapitulations will enable the reader to ascertain the aggregate cash capital, value of apparatus, value of salt and ice, of food fish, fish products, shell fish, of food preparations, and the number of persons engaged in The Fisheries, by counties and for the State. The subsidiary tables will show aggregations for the details in the general headings; for instance, the number of vessels and the total value for the State; the total cash capital; the number of weirs and value; respective quantities of domestic and imported salt, with value; the "catch" of cod, mackerel, etc., by quantities and value; the aggregate value of the different forms of food fish preparations; and the total number of partners, stockholders, and persons employed on vessels and on land.

THE SEA AND SHORE FISHERIES — Continued.

FOOD FISH: BY NAME.

Bluefish.

[*Pomatomus saltatrix*. — A very gamy food fish found on the Atlantic and Gulf coasts. Bluefish vary in weight from one to 20 pounds, according to season and locality. Large numbers are caught during the Summer months with nets, traps, seines, and hand lines.]

Clams.

[A mollusk largely used for food and bait; found on all our coasts. There are various species, most of which are edible. The fishing or digging these bivalves forms an important industry in both the Atlantic and Pacific States. Dredges, rakes, tongs, hoes, forks, and baskets are used in gathering them. Large quantities are salted or pickled and sold for bait.]

Cod.

[*Gadus callarius*. — One of the most important food fishes of the United States. It is caught on both the eastern and western coasts, but most extensively along the coasts of the Middle States, New England, and British America. It varies in weight from 3 to 75 pounds. It is caught with hand lines, trawls, nets, etc., and is sold fresh, pickled, salted, and dried. Food preparations, such as boneless and desiccated fish, are also made from cod. The sounds are used in the manufacture of glue.]

THE SEA AND SHORE FISHERIES—Continued.

FOOD FISH: BY NAME—Continued.

Halibut.

[*Hippoglossus vulgaris*.—The largest and most valuable of the flatfishes; found in the North Atlantic and Pacific oceans. It is one of the largest species used for food, sometimes weighing over 300 pounds. The average weight is from 50 to 75 pounds. It is caught with trawls and hand lines. There are three grades of halibut. The "White," which has its under side immaculate, is considered best, and brings the highest price; the "Gray" is blotched on the under side and sells for a third less; the "Sour" is tainted, and brings only about one-fourth as much as the "White." Small young fish, weighing from 10 to 20 pounds, are called "Chickens," and are much sought after by epicures. Halibut are sold fresh and are also cured and smoked; the napies are pickled. An oil used for currying purposes is made from the head, and the residue is used as a fertilizer under the name of "chum."]

Herring.

[*Clupea harengus*.—A very important food fish found in the North Atlantic as far south as Sandy Hook; it is never found in brackish or fresh waters. They weigh from  $\frac{1}{2}$  to 1 pound; average length 10 inches. They are caught in pounis, traps, weirs, and gill nets, and by totering. As a food fish they are used fresh, salted, pickled, smoked, and canned; used also extensively for bait in the cod, haddock, halibut, catfish, and hake fisheries.]

Oysters.

[The most important bivalve found on the coast. There are two classes, "Natives" and "Plants." The former are found on the entire coast; the latter in localities where the cultivation of the oyster is particularly profitable. Oysters are obtained by dredging, raking, and tonging, and are very extensively used in the canning industry. The shells are used in manufacturing lime and cement and for building highways. Native oysters will open about one gallon to the bushel; plants do somewhat better.]

Pollock.

[*Pollachius virens*.—A food fish of importance, found mainly off the New England coast. It sometimes occurs as far south as Virginia. The average weight of the fish is about 10 pounds. They are caught with seines, nets, and hand lines. For food they are sold fresh, salted, and dried. The sounds are used in the manufacture of glue, the livers are sold in large quantities for the manufacture of oil, and the tongues are cut out and sold fresh.]

## Scallops.

[*Pecten irrodians*. — An edible bivalve found off the coasts of Long Island, Rhode Island, and southern Massachusetts in paying quantities; less numerous South. It is obtained by dredging and raking. The powerful central muscle by which the animal opens and closes its shell forms the edible portion. The shells are of commercial value. The rims or refuse are used for fertilizers.]

## Squeteague.

[*Cynoscion regalis*. — An excellent food fish found in abundance along the Atlantic coast from Cape Cod to Florida. It averages about 1½ pounds in weight, though some individuals attain a weight of 30 pounds. They are caught in seines and gill nets and with hook and line. The sounds are of commercial value.]

OCEAN AND COASTWISE COMMERCE—  
MASSACHUSETTS.

---

## VESSELS, TONNAGE, AND VALUE.

[In the matter of number of vessels, gross tonnage of vessels, and value of vessels engaged in commerce in Massachusetts, the aggregate for the Commonwealth as determined by addition of the totals for the several ports are in excess of the actual aggregates for the reason that many vessels entered several ports. In view of this fact it would be manifestly inaccurate to use the aggregates (including duplications) in any

VESSELS, TONNAGE, AND VALUE.

statement regarding the aggregate number of vessels, aggregate gross tonnage of vessels, and aggregate value of vessels engaged in Commerce in Massachusetts. The plan adopted has been to count the vessels, tonnage, and value only once if in the same town. Where they occur in different towns, however, they have been credited to each in turn, but in making up the total for the State they have been counted only once.]
